

# Package ‘MDMeasure’

February 9, 2018

**Title** Mutual Dependence Measures via Energy Statistics  
**Version** 1.0.0  
**Date** 2018-01-30  
**Description** Implementation of mutual dependence measures and mutual independence tests in  
Jin, Z., and Matteson, D. S. (2017) <<https://arxiv.org/abs/1709.02532>>.  
**Depends** R (>= 3.4.0)  
**Suggests** testthat (>= 2.0.0),  
energy (>= 1.7-0)  
**License** GPL (>= 2)  
**LazyData** true  
**RoxygenNote** 6.0.1  
**Collate** 'MDMeasure-package.R'  
'mdm.R'  
'mdm\_test.R'

MDMeasure-package	<i>Mutual Dependence Measures via Energy Statistics</i>
-------------------	---

---

## Description

MDMeasure: A package for mutual dependence measures via energy statistics

## Details

The MDMeasure package provides measures of mutual dependence and tests of mutual independence.

## Measuring mutual dependence

The mutual dependence measures include:

- asymmetric measure  $\mathcal{R}_n$  based on distance covariance  $\mathcal{V}_n$
- symmetric measure  $\mathcal{S}_n$  based on distance covariance  $\mathcal{V}_n$
- complete measure  $\mathcal{Q}_n$  based on complete V-statistics
- simplified complete measure  $\mathcal{Q}_n^*$  based on incomplete V-statistics
- asymmetric measure  $\mathcal{J}_n$  based on complete measure  $\mathcal{Q}_n$
- simplified asymmetric measure  $\mathcal{J}_n^*$  based on simplified complete measure  $\mathcal{Q}_n^*$
- symmetric measure  $\mathcal{I}_n$  based on complete measure  $\mathcal{Q}_n$
- simplified symmetric measure  $\mathcal{I}_n^*$  based on simplified complete measure  $\mathcal{Q}_n^*$

## Testing mutual independence

The mutual independence tests based on the mutual dependence measures are implemented as permutation tests.

mdm

---

*Mutual Dependence Measures*

---

## Description

mdm measures mutual dependence of all components in  $X$ , where each component contains one variable (univariate) or more variables (multivariate).

## Usage

```
mdm(X, dim_comp = NULL, dist_comp = FALSE, type = "comp_simp")
```

## Arguments

$X$	A matrix or data frame, where rows represent samples, and columns represent variables.
dim_comp	The numbers of variables contained by all components in $X$ . If omitted, each component is assumed to contain exactly one variable.
dist_comp	Logical. If TRUE, the distances between all components from all samples in $X$ will be returned.
type	The type of mutual dependence measures, including <ul style="list-style-type: none"> <li>• asym_dcov: asymmetric measure <math>\mathcal{R}_n</math> based on distance covariance <math>\mathcal{V}_n</math>;</li> <li>• sym_dcov: symmetric measure <math>\mathcal{S}_n</math> based on distance covariance <math>\mathcal{V}_n</math>;</li> <li>• comp: complete measure <math>\mathcal{Q}_n</math> based on complete V-statistics;</li> <li>• comp_simp: simplified complete measure <math>\mathcal{Q}_n^*</math> based on incomplete V-statistics;</li> <li>• asym_comp: asymmetric measure <math>\mathcal{J}_n</math> based on complete measure <math>\mathcal{Q}_n</math>;</li> </ul>

- `asym_comp_simp`: simplified asymmetric measure  $\mathcal{J}_n^*$  based on simplified complete measure  $\mathcal{Q}_n^*$ ;
- `sym_comp`: symmetric measure  $\mathcal{I}_n$  based on complete measure  $\mathcal{Q}_n$ ;
- `sym_comp_simp`: simplified symmetric measure  $\mathcal{I}_n^*$  based on simplified complete measure  $\mathcal{Q}_n^*$ .

## Value

`mdm` returns a list including the following components:

<code>stat</code>	The value of the mutual dependence measure.
<code>dist</code>	The distances between all components from all samples.

## Examples

```
# X is a 10 x 3 matrix with 10 samples and 3 variables
X <- matrix(rnorm(10 * 3), 10, 3)

# assume X = (X1, X2) where X1 is 1-dim, X2 is 2-dim
mdm(X, dim_comp = c(1, 2), type = "asym_dcov")

# assume X = (X1, X2) where X1 is 2-dim, X2 is 1-dim
mdm(X, dim_comp = c(2, 1), type = "sym_dcov")

# assume X = (X1, X2, X3) where X1 is 1-dim, X2 is 1-dim, X3 is 1-dim
mdm(X, dim_comp = c(1, 1, 1), type = "comp_simp")
```

---

<code>mdm_test</code>	<i>Mutual Independence Tests</i>
-----------------------	----------------------------------

---

## Description

`mdm_test` tests mutual independence of all components in `X`, where each component contains one variable (univariate) or more variables (multivariate). All tests are implemented as permutation tests.

## Usage

```
mdm_test(X, dim_comp = NULL, num_perm = NULL, type = "comp_simp")
```

## Arguments

<code>X</code>	A matrix or data frame, where rows represent samples, and columns represent variables.
<code>dim_comp</code>	The numbers of variables contained by all components in <code>X</code> . If omitted, each component is assumed to contain exactly one variable.
<code>num_perm</code>	The number of permutation samples drawn to approximate the asymptotic distributions of mutual dependence measures. If omitted, an adaptive number is used.
<code>type</code>	The type of mutual dependence measures, including <ul style="list-style-type: none"> <li>• <code>asym_dcov</code>: asymmetric measure <math>\mathcal{R}_n</math> based on distance covariance <math>\mathcal{V}_n</math>;</li> <li>• <code>sym_dcov</code>: symmetric measure <math>\mathcal{S}_n</math> based on distance covariance <math>\mathcal{V}_n</math>;</li> <li>• <code>comp</code>: complete measure <math>\mathcal{Q}_n</math> based on complete V-statistics;</li> <li>• <code>comp_simp</code>: simplified complete measure <math>\mathcal{Q}_n^*</math> based on incomplete V-statistics;</li> <li>• <code>asym_comp</code>: asymmetric measure <math>\mathcal{J}_n</math> based on complete measure <math>\mathcal{Q}_n</math>;</li> <li>• <code>asym_comp_simp</code>: simplified asymmetric measure <math>\mathcal{J}_n^*</math> based on simplified complete measure <math>\mathcal{Q}_n^*</math>;</li> <li>• <code>sym_comp</code>: symmetric measure <math>\mathcal{I}_n</math> based on complete measure <math>\mathcal{Q}_n</math>;</li> <li>• <code>sym_comp_simp</code>: simplified symmetric measure <math>\mathcal{I}_n^*</math> based on simplified complete measure <math>\mathcal{Q}_n^*</math>.</li> </ul>

## Value

`mdm_test` returns a list including the following components:

<code>stat</code>	The value of the mutual dependence measure.
<code>pval</code>	The p-value of the mutual independence test.
